01 // THE SCALE

The new normal

48% of employees say their work feels chaotic and fragmented.

52% of leaders say the same about their own work.

The people whose whole job is deciding are the most fragmented in the building.

> **What's missing is a decider.**

Source: Microsoft Work Trend Index, June 2025.

02 // THE ROLE

Give the week a chief of staff

Presidents run on this role. It decides what reaches the desk, and it never writes the policy.

PRIORITISE

Ranks everything by the stakes on each project.

HOLD

Parks what is not for now, with a date to come back.

ROUTE

Sends work where it belongs. Only decisions reach you.

BRIEF

Reports every weekday morning without being asked.

> **“Help me with X” means help me decide and route X, never produce X.**
>
> Brooks needed one system with no stake in pleasing him.

It runs on 4 files

chief-of-staff/

profile.md
→ you, and its rules · under 50 lines
→ read before every decision

goals.md
→ goals ranked · projects under each
→ under 30 lines

inbox.md
→ raw capture, verbatim and dated
→ it never replies here

state.md
→ Active, max 10 · next step + deadline + goal
→ everything else Parked, one line each

It interviews you first. It does not build while guessing.

> Every call it makes traces back to these 4 files, or it asks you.

04 // THE REACH

Connect your tools, read and draft only

SWITCH OFF

- permission to send or delete
- permission to update or create

WRITE INTO PROFILE.MD

- never modify a connected tool
- ask before any write

THE BRIEF GAINS

- today's calendar
- mail that is waiting on your decision

It reads your calendar and your mail. It cannot touch either.

05 // LIVE DEMO

“Be my chief of staff.”

We start from an empty folder and end at the first brief. Got the prompt file? Build along.

1 · INTERVIEW
it refuses to build while guessing

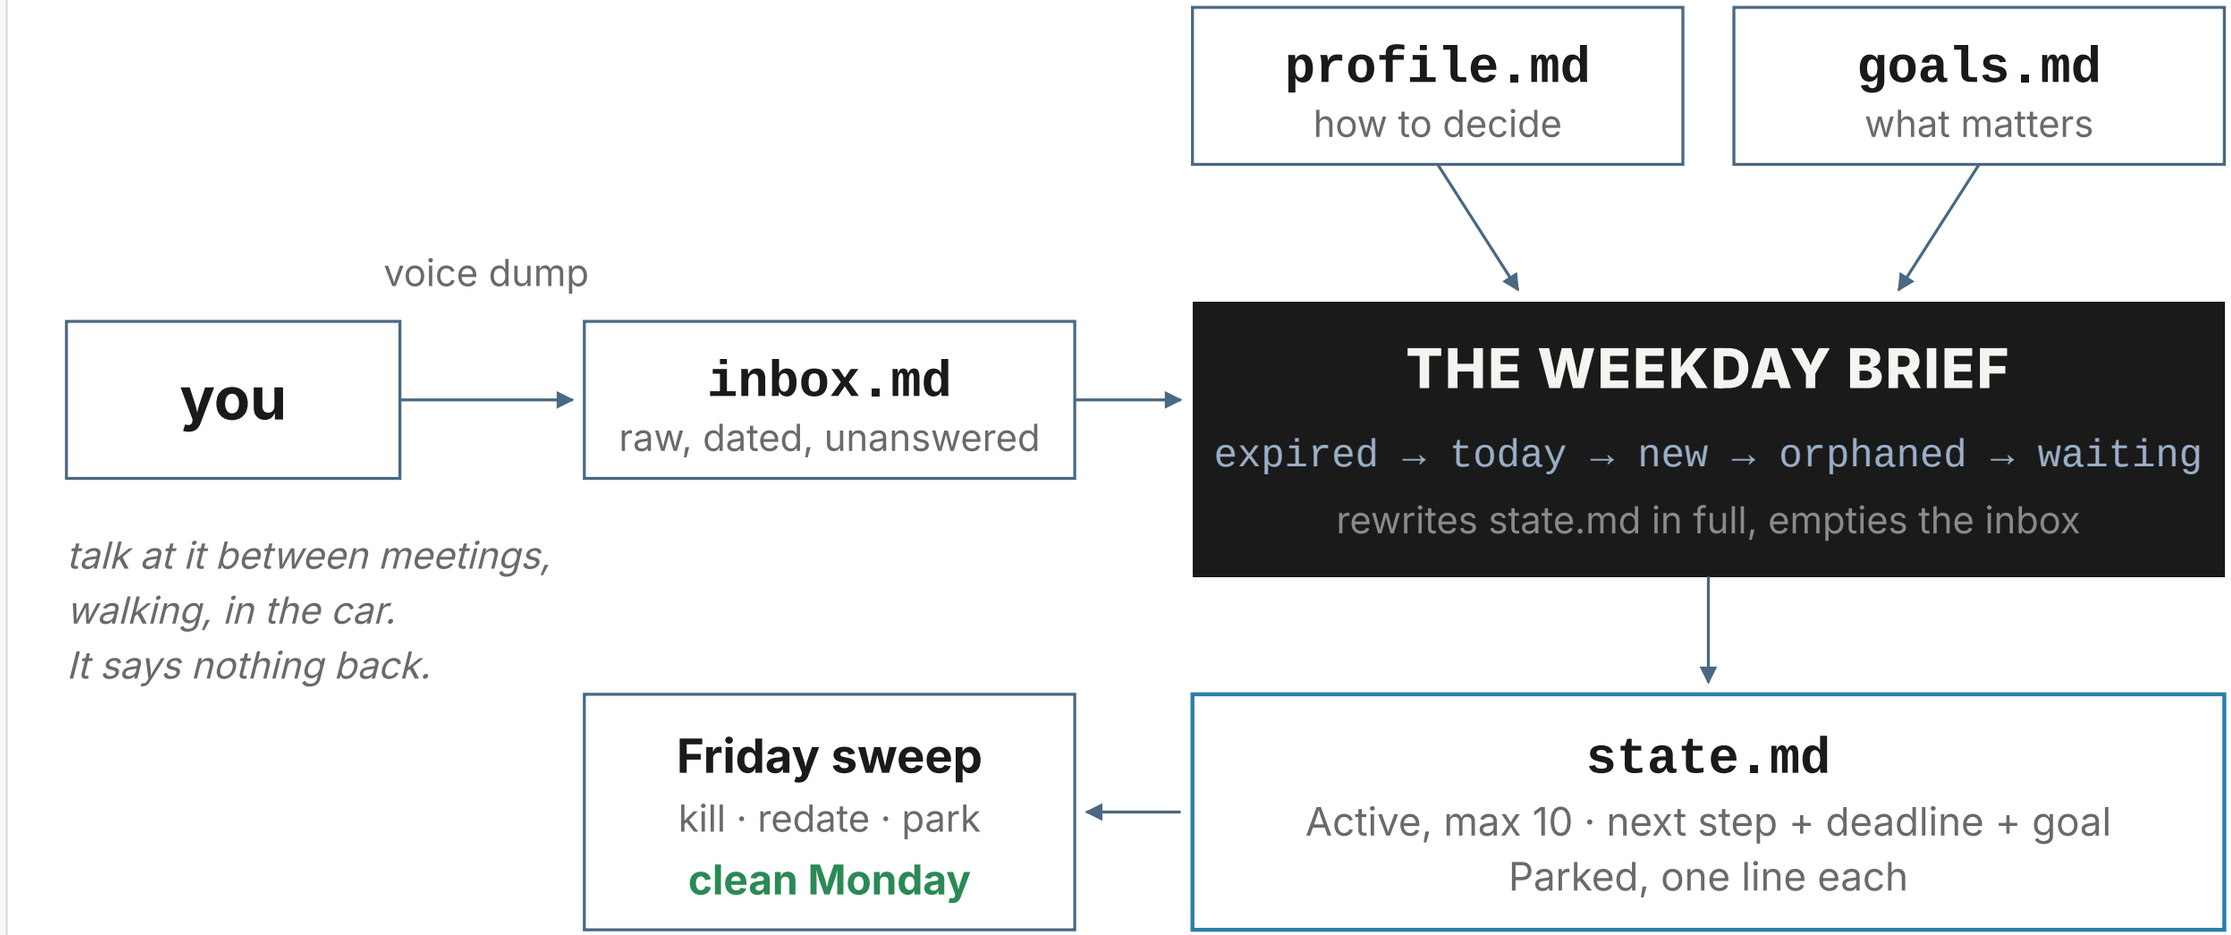

2 · FILES
the 4-file memory gets written

3 · SCHEDULE
the weekday task gets created

4 · FIRST BRIEF
it fires once, on demand

Watch it refuse to build and start interviewing you instead.

Every weekday, 5 checks in a fixed order

The brief is the only writer, so the list stays accurate whether or not you show up.

07 // TAKEAWAYS

01 **A chatbot agrees with whoever is asking. Brooks asked more than 50 times.**

02 **Give the week a chief of staff: it decides, and it never does the work.**

03 **One weekday brief keeps the list true whether or not you show up.**

> **Your turn:** build it this week, run the audit prompt on day 3, and post what it caught.

Product Builder Certification: Spec Engineering Beyond Vibe-Coding →

FROM THE LAST COHORT

★★★★★

Getting started with SPEC engineering has been much easier thanks to this workshop. I highly recommend it. I'm not a technical person, and the way they guided us step by step was a huge help.

Noe COHORT 1
Product Manager & Technical Project Manager · Wizeline

★★★★★

If you have a basic understanding of product management, claude code skills, and harnessing, this course is going to help you get an idea on how the agentic coding harnessing could be architected, based on the "building backwards" principles from Amazon. I think you would benefit from the the course if you are more technical, but I think it is equally beneficial for non-tech people who would like to take GK's framework and start vibe coding without facing AI-generated slops.
